Bespoke Engraving Service

Our finishes in the Helvetica font style, unfilled.

Our bespoke engraving service means you can customise your light switches to denote the function of each button or toggle. Engraving provides ease of use and eliminates confusion on multi gang plates.

All finishes can be engraved with the exception of the Paintable range.

As standard we offer font styles Helvetica & Garamond, in the 3mm size. These can be filled in black ink or left unfilled for the plate finish to show through. The unfilled finish will vary de-pending on the finish of the plate.

We are able to provide other font styles upon request. Please note an additional set up fee may apply if we have not used the requested font before. If we do not possess the requested font style, we will require you to supply us with the font file.

We are also able to provide engraved symbols if desired, please speak to the sales team for further information.

Our standard lead-times are 3-4 weeks. For larger orders and orders placed during holiday periods, the sales team will advise on your specific lead time.

For a quote, please contact our sales team, who will be delighted to discuss your engraving en-quiries.

Engraving samples are on permanent display at our Design Centre, Chelsea Harbour show-room.

Please contact sales@forbesandlomax.com for further information
